Accessory Components And Quantity:

30) mug tubes, along with a long-wave uv lamp for reading results, 12-well dri-bath incubator, (25) sterile sampling bags, containing a dechlorinating agent, (1) ph pocket pal tester, for 100 total reagents and 100 free chlorine tests

Product Name:

Test kit multiparameter30mug tu w/longwave uv lamp f/read result

Special Features:

Model cec-2 with u/v lamp and incubator for total coliform and e-coli testing; the coliform test uses hach lt/mug tubes ready-to-use, screw capped fermentation vials containing lauryl tryptose broth and mug reagent; it provides a reliable, quick way to determine the presumptive presence of coliforms and the specific presence of escherichia coli, a fecal coliform
