Special Features:

Species/specificity hu; format/formulation direct detection; range 5-500 uIU/ml; sample size 50 ul; incubation time 45 minutes at room temperature; sensitivity type 0.15 uIU/ml; complete 1 pre-coated strip-well plate; hrp conjugated detection antibody; dilution buffers, wash solution, tmb, and stop solution included; 6 pre-diluted standards included; 2 serum controls included; accurate calibrated to mrc 2nd irp 66/304; versatile serum, plasma; 50 ul sample volume required

Functional Description:

This human endocrine immunoassay is a complete sandwich elisa which features a monoclonal antibody-coated strip well plate and a pre-diluted, lyophilized standard; the detection antibody is horseradish peroxidase, hrp, labeled; research use only

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
