End Application:

Dm-114b dme

Special Features:

Solid-state transmitter; 325 watts () of output power; two separate microprocessors are used; one to provide all processing and control computations and two perform the digital and analog input/output generation and input frequency tuning interfaces

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A532d0
