Overall Length:

6.000 inches

Overall Height:

3.600 inches

Overall Width:

5.500 inches

End Application:

Aircraft t43a

Special Features:

8electrical power 28 +/- 4 vdc at 1.5 amp max; the indicator is comprised of seven electromechanical counter mechanisms and associated electronic circuitry selectively energized by electrical power; one used for elapsed time indication; weight 6 lbs

Functional Description:

Cpart of the accelerometer counting group (one indicator, one transmitter); records the number of occurrences of each calibrated 'g' level; each counter records the count for a particular 'g' level

Fsc Application Data:

Computer, air speed

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli
