Overall Length:

10.687 inches

Overall Height:

1.438 inches

Overall Width:

6.000 inches

Average Life Rating:

2000.0

Average Life Measurement:

Hours

Basic Shape Style:

Rectangular or square

Inclosure Type:

Hermetically sealed

Installation Design:

Mobile

Circuit Construction Type:

Solid state

Signal Data Type Per Channel:

1st operating channel proportional and 2nd operating channel discrete voltage and 3rd operating channel discrete voltage

Special Features:

Converter has four channels for egt input & output; eight channels each shall drive two tachometer indicator channels; four channels each receive synchro signals from fuel flow transmitter & drive two rate of flow indicator channels; power input 115v 400 hz

Reference Data And Literature:

T.O. 5e6-3-56-14

Supplementary Features:

Manufacturers name: converter

Specification Data:

81349-mil-e-27669b government specification

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A32200
