End Application:

Apu for the c-17

Special Features:

A unique item designed to sense air flow through the compressor section of a gas turbine, it senses the delta p across two probes to generate an electrical signal to an electronic control unit relating to air flow verses temperature causing inlet air to be controled preventing compressor surge

Special Test Features:

Transmitter is shock mounted

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T145-b
