Ac Voltage Rating:

115.0 volts

Frequency Rating:

Between 60.0 hertz and 400.0 hertz

End Application:

F-15 avionics age

Electrical Power Source Relationship:

Alternate operating

Inclosure Feature:

Multiple item w/housing

Test Type For Which Designed:

Malfunction isolation

Phase:

Single/three

Special Features:

Channel a consists of a 4 cabinet bank; channel b consists of a 3 cabinet bank; all cabinets totally enclosed; housing material aluminum

Functional Description:

Contains the stimulus, measurement, switching and control equipment required for the testing and repair of fire control subsystem components; has the capability for simultaneous testing and maintenance of transmitters, waveguides, or antenna (one antenna fixture only; items tested include antenna p/n 1992613-1/02, radar transmitter p/n 1992614-1/-2/-3/-4/-5, low volt power supply p/n 1993491-2, antenna gimbal assembly p/n 68d260082-1001 and array boresight p/n 68d260083-1001

Reference Data And Literature:

T.O. 33d7-35-39-4

Supplementary Features:

Manufacturers name: antenna test station

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fiig:

T228-a
