| Overall Length:                                                                         |
|-----------------------------------------------------------------------------------------|
| 4.125 inches                                                                            |
| Overall Height:                                                                         |
| 0.500 inches                                                                            |
| Overall Width:                                                                          |
| 1.875 inches                                                                            |
| Component Type And Quantity:                                                            |
| 1 printed wiring board and 34 capacitor and 21 diode and 107 resistor and 39 transistor |
| Shelf Life:                                                                             |
| N/a                                                                                     |
| Unit Of Measure:                                                                        |
|                                                                                         |
| Demilitarization:                                                                       |
| No                                                                                      |
| Fiig:                                                                                   |
| A511I0                                                                                  |
