Unpackaged Unit Width:

44.360 inches

Unpackaged Unit Height:

69.130 inches

Component Quantity:

104

Special Features:

Used for testing, adjusting and troubleshooting the following modulator-receiver-transmitter units; md-608/apq-113, md-764/apq-114, and md-843/apq-144, major assemblies in cabinets pulse generator, meter assembly. Power meter, ac/dc voltmeter, rms voltmeter, hi frequency counter, local oscillator, power and signal input panel, afc accuracy panel, signal generator, waveguide and pressurization panel, 5 power supplies +6.3 vdc, +25 vdc, -25 vdc, +150 vdc and + 12 vdc, microwave amplifier, ac/dc differential voltmeter, noise filter meter, oscilloscope, dual trace, electronic counter, and 300 vdc power supply, and various test and adaptor cables with extenders, and waveguides

Unpackaged Unit Weight:

675.000 pounds

Supplementary Features:

4-bay cabinet with 15 rack mounted sub-assemblies supported by 16 swivel type casters

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A23800
