End Application:

CALI-BR-ATE-STES

Special Features:

Installed in place of the standard test fixture plug in, it provides accurate calibration voltages and currents for the horizontal and vertical deflection circuits and accurate loads for the collector supply and step generator circuits through the external input and output lines at the test fixture; c/o vertical, display offset, horizontal and step generator switches of the 576 have matching switches on the calibrator for direct reading, comparison style adjusting and checking, using the 576's own display; totally dependent on the 576 for regulated low voltage power supplies and ac line voltage

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
