End Application:

low tactical generic

Functional Classification:

Aa-4.1

Functional Description:

Used for direct-reading measurements of average radio frequency power; also used for testing and aligning radar systems, data transmission systems, and other high-power generators; also used to support the an/tpn-8

Entry Date:

71-01-15

Reference Data And Literature:

Tm11-6625-383-15 w/change 1 23 feb 61; cubic corporation p/n mc-1b

General Description:

Average power 0 to 600 watts, vswr 1.1 max, frequency range basic unit 2.6 to 3.95 kmc, with adapters accuracy form 0.2 db, input connector an type ug-53/u, colorimetric fluid, distilled, water, power input 115 v, 50 to 60 cycles, 120 watts

Type/model Designation:

An/usm-83

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
