Ac Voltage Rating:

115.0 volts and 230.0 volts

Frequency Rating:

Between 50.0 hertz and 60.0 hertz

Product Name:

Distortion measurement system

Special Features:

Measures distortion down to .002% in less than 5 seconds; fully automatic nulling; measures ac voltage 100 uv full scale to 100 v full scale with 2% accuracy; measures power -80 dbm full scale to +40 dbm full scale; measures voltage or signal to noise ratios with 100 db dynamic range; designed for use in strong rf fields; item is a distortion analyzer and oscillator simultaneously tuned in one system; uses the .001% distortion balanced and floating oscillator for testing from 10 hz to 110 khz; weight 25 lbs

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

A532p0
