Ac Voltage Rating:

115.0 volts

Frequency Rating:

Between 60.0 hertz and 400.0 hertz

Major Components:

Includes digital counter unit to monitor setups; oscilloscope to monitor waveforms

End Application:

An/apn 59 (v) 5841010535763 radar set

Electrical Power Source Relationship:

Operating

Inclosure Feature:

Multiple item w/housing

Test Type For Which Designed:

Provides inputs, loads, switching & metering; also provides circuitry to simulate pulse transformer & magetron, high voltage inverse overloads, & to excite modulator decks

Special Features:

Requires non-inductive 44 ohm load; 27 vdc

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

T228-a
