End Application:

Television monitor ip-1071/u

General Description:

Required to generate plus 15, 000 volts-dc w/in television monitor to be measured for proper brightness/contrast level; to generate electron beam used to excite phosphor coating of cathode ray tube; tee will reduce high voltage by factor of 1, 000, reading of plus 15.5 volts-dc may be obtained on std.Voltmeter

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
