Ac Voltage Rating:

115.0 volts

Dc Voltage Rating:

27.0 volts

Frequency Rating:

400.0 hertz

End Application:

Transmitting set, countermeasure an/alt-28, fscm 80058

Electrical Power Source Relationship:

Operating

Inclosure Feature:

Multiple item w/housing

Test Type For Which Designed:

Used to test and evaluate bwo tubes from the an/alt-13 and an/alt-38 transmitter systems

Phase:

Single/three

Functional Classification:

Aa-9.3

Special Features:

Consists of several drawers of test equipment combined to form a three cabinet console; console is mounted on a one piece pontoon base which has swivel casters to allow for movement and positioning; swivels has toe operated locks; the drawers consist of: primary power monitor assembly, digital voltmeter, high voltage monitor assembly, hydraulic control assembly (to regulate amount of coolant which flows through the bwo under test), modulator power supply/liquid cooler assembly, test set control assembly, calorimeter, digital readout electronic counter

Reference Data And Literature:

T.O. 33aa21-27-1

Supplementary Features:

Manufacturers name: test set, microwave tube

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

T228-a
