Ac Voltage Rating:

115.0 volts

Frequency Rating:

60.0 hertz

Electrical Power Source Relationship:

Operating

Inclosure Feature:

Multiple item w/housing

Test Type For Which Designed:

In-channel test

Phase:

Single

Special Features:

Mfg name-transceiver test equipment

Functional Description:

Performs automatic/manual in-channel test of am/fm communication receivers and transmitters from 150 khz to 999 mhz

Supplementary Features:

C/o 8901a modulation analyzer, 8656a signal generator, 8903a audio generator 8954a transceiver interface, 8498a opt 030 attenuator, various cables and 50-ohm termination

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T228-a
