General Description:

Highly selective receiver using synthesized local oscillator to provide crystal controlled frequency accuracy and stability for use as selective voltmeter, rf field strength meter, making interference measurements, and general purpose test receiver; freq range 9 khz to 30 mhz on digital display with resolution of 100 hz; internal calibration; ac line or dc battery operating power; rod and loop antenna mounted on tripod; 4-scale meter; oper temp minus 10 to positive 45 degrees c; o/a dims 19.1 in. Lg; 13.6 in. W; 7.8 in. H

Shelf Life:
