**End Application:**

An/gmq-33, cloud height set

**Special Features:**

Previous non approved item name: test set, battery charger; simulates the internal impedance of a battery at various points in the charging cycle; a potentiometer is used on the test set to achieve full charge and make the internal impedance a constant, this will show if the battery charger is capable of producing a constant current for a particular impedance; an indicator lamp on charger will show if current condition is maintained

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No

**Fiig:**

T228-a
