End Application:

An/gmq-33, cloud height set

Special Features:

Previous non approved item name: test set, battery charger; simulates the internal impedance of a battery at various points in the charging cycle; a potentiometer is used on the test set to achieve full charge and make the internal impedance a constant, this will show if the battery charger is capable of producing a constant current for a particular impedance; an indicator lamp on charger will show if current condition is maintained

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T228-a
