Frequency Range Rating:

+26.500/+40.000 gigahertz

Product Name:

Sweep oscillator

Special Features:

Output power +8 dbm; pulse amplitudes are leveled for pulse widths as narrow as 1 us; deviations up to 20 mhz; front panel operations; benchtop use; includes 2 flexible cables (source module interface cable and rf cable); hp-1b programmability; resolution 2 times the resolution of the input frequency

Functional Description:

Cmillimeter wave source module that offers internally level high output power, full waveguid band frequency coverage, and the high frequency accuracy and resolution of the driving microwave source

Reference Data And Literature:

1987 hewlett packard catalog

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

T320-j
