Circuit Current For Which Designed:

Dc

Indicator Type:

Dial w/pointer

Installation Design:

Bench

Movement Type:

Vibrating reed

Power Source:

Internal

Scale Graduation Type:

Nonlinear single indicator all ranges

Scale Selection Method:

Terminal

Operating Voltage Rating In Volts:

28.0 dc

Special Features:

Scale on the ohmmeter is expanded in the low range and is color coded; color coded bands are green, yellow, red

Functional Description:

Used with probe p/n 722-860 to measure the resistivity of electrostatic paint; best electrostatic paint results are achieved when the material is above 25 megohms per centimeter; used to maintain electrostatic airless spray guns

Style Designator:

Portable w/tilt view handle

Supplementary Features:

Manufacturers name: resistivity megohm meter

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A310a0
