Overall Length:

32.100 inches

Overall Height:

12.000 inches

Overall Width:

17.500 inches

Dc Voltage Rating:

Between 0.00 volts and 5.25 volts

End Application:

An/urc-10 (v) 4, radio set

Frequency Range:

+0.0/+50.0 megahertz

Special Features:

Includes wiring between the shop replaceable unit (sru) connectors and system resource interface of the gen rrad 2751; load signal conditioning circuits; input circuit paths; output circircuit paths; provide connection to clock generator circuits; dc output impedance 1.0 ohm; output current porm 600 ma; sensor pin is dual-threshold comparator

Functional Description:

Performs fault verification, troubleshooting, final testing of voice/control monitor set mux module assembly, p/na205a484-01

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A537k0
