Ac Voltage Rating:

115.0 volts

Frequency Rating:

60.0 hertz

Major Components:

Four-bay console consisting of four connected cabinets w/equipment, operator and interface bench containing a computer subsystem, uut cooling cart, self test/calibration capability consisting of interface test adapter and testsoftware, control and support software

Electrical Power Source Relationship:

Operating

Inclosure Feature:

Multiple item w/housing

Test Type For Which Designed:

Confidence testing and operational assurance/fault isolation of unit under test

Phase:

Three

Functional Classification:

Used to test an/apg-68 and an/apq-164 radar sets

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

T228-a
