Furnished Items And Quantity:

Chart 1

Features Provided:

Knife edge pointer

Special Features:

Incorporates a precision miniature linkage similar to a drafting table mechanism to convert the angular motion of the moving coil into a straight line chord which eliminates the small tangential errors introduced by knife edge writing systems; thermal point writing produces accurate clear tracings for graphic recorders; employs a closed loop servo system to achieve 100% accuracy; includes multi-stage amplifier, a driver stage and a moving magnetic coil; changes in coil position are sensed by the pathfinder transducer that converts the position to a proportional electrical signal, this signal is compared to the recording systems signal input and the differences are noted by the servo amplifier stage producing an output voltage to drive the coil to a null position

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
