**Special Features:**

Original name was "generator, arb func"; this unit functions as an arbitrary function generator; it provides standard functions & arbitrary waveforms; includes sweep, fsk, & wave hop; 12-bit amplitude resolution produces low distortion ac & good dc accuracy; internal time base: 42.9 mhz; waveform memory: 16k samples; built-in waveforms: sine, square, ramp, triangle, si (x) /x, noise & haversine; freq sweep: 0.01 hz to 15 mhz; output impedance: 50 ohms porm 1 pct; 4 waveforms in active memory; jitter: 24 nsec

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

Yes - demil/mli

**Fig:**

T228-b
