End Application:

F16 gats

Unit Type:

Main frame test signal

Special Features:

0.8 hz to 25 mhz programmable sample rate; 12-bit vertical resolution; 10.22v into 50 ohms; programmable output attenuator for precision low level signals

Functional Description:

Functions as an arbitrary waveform generator with built-in square, sawtooth and triangle waveforms

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T228-b
