Ac Voltage Rating:

110.0 volts

Frequency Rating:

60.0 hertz

Major Components:

Vg91 video generator; tva92 tv video analyzer

Electrical Power Source Relationship:

Operating

Inclosure Feature:

Multiple item w/housing

Test Type For Which Designed:

Signal substitution; function analyzing

Functional Description:

Vg91 video generator provides off-air tv and cable channels to recreate trouble symptoms and isolate receiver problems, serves as the signal source for tva video analyzer which adapts video analyzing for isolating faulty stages in the sync, video, chroma, deflection, and audio sections of a ntsc television receiver or video monitor from the detectors to the crt or speaker

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

T228-a
