Ac Voltage Rating:

115.0 volts

Dc Voltage Rating:

28.0 volts

Frequency Rating:

60.0 hertz

Electrical Power Source Relationship:

Operating

Internal Battery Accommodation:

Not included

Phase:

Single

Special Features:

Improvement program upgrade, replaces pn t976b404g02, nsn 01393362 manufacture name is antenna test and tune test set.

Functional Description:

Test set used to align phase shifters in antenna and detect and isolate faults in antenna equipment of radar sets an/apy-1 and an/apy-2 used in the e-3 awacs acft

Reference Data And Literature:

T.O.33aa20-26-1

Supplementary Features:

Bcomponents: antenna test and tune pn ka421701g01: cart assembly pn ad421740g01: detector amplifier assembly ad419627g1: software, pnsfva421701p01; prom programmer pn 2900; mount antenna, pn ad421741g01

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
