**Overall Length:**

20.000 inches

**Overall Height:**

1.830 inches

**Overall Width:**

7.000 inches

**End Application:**

Test station elec

**Unit Type:**

Programmable power modules

**Special Features:**

Zmst power modules are a group of programmable power supplies that are compatible with kepco's single address, multiple instrument serial controlbus these modules, provide precision interactive control in the 200 watt power class. These power modules employ switching technology for high efficiency and high power density combined with linear stabilization techniques for accuracy resolution. These modules plug in from the front and may be unplugged and removed without shutting down the entire power system. Each power module contains a single address, multiple instrument serial port. It is a 2-wire serial bus operating at 375khz that can address as many as 27 separate modules. This bus can interface directly to a pc or to a gpib controller

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No

**Fig:**

T228-b
