End Application:

Used in peml labs to calibrate test equipment

Usage Design:

External

Element Material:

High thermal conductivity silicon potting compound

Voltage Drop In Millivolts:

200.0

Current Rating And Type:

10.0 amperes ac and 100.0 amperes ac

Special Features:

Mfg name is ac current shunt set. Each set of the el-9800 consists of the following shunts, el-9810, el9830, el-9850, el-9880. This current shunt set is a set of coaxial ac current shunts designed for calibrating transconductance amplifiers and other current calibrating devices with a range of 10 through 100 amperes and a frequency range of dc to 100khz. This set is encased in a sturdy, rigid, air and water tight carrying case, has an adjustable height support stand. Each shunt has an lc male connector for the input, lc female connector for output, and a bnc female for the voltage sense terminal

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A33500
