Frequency Range Rating:

+0.125/+2048.000 megahertz

Special Features:

Mfg name is synthesized signal generator. 0.01 hz, db setting resolution, high signal purity, versatile modulation functions, high-stability crystal oscillator, high output signal with an output of +17 dbm can be output across the full frequency range, also has sweep function

Functional Description:

This synthesized signal generator is used for various local and reference signals, also this synthesized signal generator has synthesizer technology which permits frequency to be set with a resolution of 0.01 hz across the full frequency range. The non-harmonic spurious is better than -100 dbc for reliable measurement at any frequency. Uses a unique low-noise yig oscillator which produces a high-purity signal with ssb phase noise of better than -130 dbc/hz (1 ghz, 20 khz offset

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli
