Dc Voltage Rating:

9.0 volts

Major Components:

Main unit; remote unit; battery charger, 115 vac, 60 hz

End Application:

Ac-130h

Internal Battery Accommodation:

Included

Inclosure Feature:

Two items

Test Type For Which Designed:

Shorts; opens; shorts to shield; crossover/phasing

Special Features:

Mfg name 1553b network tester; easy-to-use battery-powered, handheld tester able to quickly troubleshoot or test out a mil-std-1553b data bus network. By means of several press-to-test switches, an lcd display and nine pass/fail leds, the dbt 100 can detect shorts, opens, crossovers and shorts-to-shield on the bus and stubs. These checks can be performed from the lru ends of the stub cables only, or from the stub and bus cables, whichever is more convenient a remote unit is provided for the phase/crossover test; the tester operates with a common 9v alkaline or rechargeable nicad battery

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T228-a
