End Application:

Gfer5458

Product Name:

Rt-1157/apx-110 pretest fixture

Functional Description:

Provides a test jack to measure the current draw of the transponder under standby, normal and test conditions with a switch to by-pass current measurement when not selected

Supplementary Features:

3has switch control of the transponder's standby/normal and power relay inputs to place the transponder in either an off, standby, or normal mode of operation; has switch control of the mode 2 enable input to place the transponder mode 2 operation in either on, off, or test condition; has switch control of the antenna input to place the transponder antenna selection in either top, bottom or diversity to test and align the transponder's voltage standing wave ratio (vswr) fault detection circuitry

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fiig:

T294-m
