**End Application:**

Test set instrument measurement equipment

**Calibration Accuracy Rating:**

The dial accuracy is + or - (1% of the setting + 1% of full range) on the center settings and + or - (2% of the setting + 2% of the full range) for x001 to 10 and x10 m. The amplitude accuracy is + or - 3db or better. The sine wave distortion less than 5% and the stability (aging) is + or - 0.25% for 24 hours. It has a 0, 20, 40, 60, 80 db attenuator control

**Product Name:**

Generator, signal

**Special Features:**

The wavetek 148 am/fm/pm function generator is two complete generators in one. It is a main generator and a modulation generator (internal or external modulation), the output is broad band, from 0.0001 hz to 20 mhz at up to 30 v p-p is available. Its overload indicator lets you know when the output is being clipped because of too much offset. It outputs accurate sine waves, triangles, square waves (positive and negative), ttl pulse, and dc.

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No

**Fig:**

T320-j
