Product Name:

Wideband power sensor series (wps)

Special Features:

Never requires field calibration, only requires calibration once per year and is traceable to national institute of standards and technology (nist); the wps measures true average power, peak power and duty cycle directly with exceptional accuracy and uses these precise measurements to calculate a wide range of other important factors, such as vswr, return loss, reflection coefficient, crest factor, average burst power and ccdf; 500mw-500 watts wideband power sensor; frequency range-25 mhz-1.0 ghz

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A515c0
