**Product Name:**

Wideband power sensor series (wps)

**Special Features:**

Never requires field calibration, only requires calibration once per year and is traceable to national institute of standards and technology (nist); the wps measures true average power, peak power and duty cycle directly with exceptional accuracy and uses these precise measurements to calculate a wide range of other important factors, such as vswr, return loss, reflection coefficient, crest factor, average burst power and ccdf; 500mw-500 watts wideband power sensor; frequency range-25 mhz-1.0 ghz

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No

**Fiig:**

A515c0
