Storage	Tempurature	Range:

-51.0 to 71.0 degrees celsius

Voltage In Volts And Current Type:

6.0 dc

Product Name:

100 mhz high-voltage differential probe

Special Features:

Attenuation: 50: 1/500: 1; operating temperature: -10 to 50 degrees c; operating altitude is 2000 m

General Description:

Measures differential voltage up to 1400 vdc plus peak ac with high cmr (common mode rejection ratio) of >50 db at 1 mhz; offers sufficient dynamic range and bandwidth for your application to make the floating measurements found in power electronics circuits safely and accurately; offers user selectable attenuation settings that make it highly versatile, allowing it be used for broad range of applications; comes with probe tip accessories for use with both small or large components in tight places; has an overrange indicator which alerts the user when the probe innput exceeds the dynamic range of the probe

N/a

Unit Of Measure:

Demilitarization:

No

Fiig:

A23900
