Mounting Type:

Base

Input Intelligence Type:

Analog and digital

Output Intelligence Type:

Analog and digital

Product Name:

Multifunction measurement and control module

Special Features:

C-size, single slot, register-based vxi module; ideal for mixed sensor and mixed signal data acquisition and closed loop control for design verification of electromechanical components and assemblies. As a multi-function scanning i/o module, it can handle variety of analog input/output and digital input /outputs at a scan rates up to 50 ksa/s. The input and output types are configurable by means of signal conditioning plug-ins (scp).

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A30800
