**Product Name:**

4800 proteomics discovery system with mascot

**Special Features:**

Opti-beam on-axis laser provides ten times greater sensitivity to identify and quantitate low-abundance proteins in complex biological samples; high-resolution precursor ion selection lets you detect and identify peptides; ideal solution for high sensitivity putative protein biomarker identification and quantitation; fully supports lc-maldi workflows allowing you to mass analyze without the time constraints of lc; enables you to analyze carbohydrates, lipids and other biological components

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No

**Fiig:**

T398-d
