Product Name:

Autosampler high performance (1200 series)

Special Features:

High sample throughput, fast cycle times, and increased productivity using overlapped injection mode. Offers a wide linear injection range without loop change. No waste of sample through variable injection volume and flow through design. Minimized carry-over by using the needle flush port. Uses well-plates and vials for flexible and convenient sample handling. Uses 384 well plates to process 768 samples unattended. Peltier temperature control from 4 to 40? C for thermally-labile samples. Upgrade to thermostated version possible.

Shelf Life:

N/a
