Current Type:

Ac

End Application:

A10a/b aircraft engine pn tf34-ge-100a

Accessory Components And Quantity:

Data acquisition unit with 2 tachometer channels, 4 vibration channels, 1 co-processor and cpu and ruggedized laptop computer. Cable harness, remote charge amplifier, printer shipping and storage cases

Angular Unbalance Location Method:

Vibration sensor

Voltage In Volts:

110.0 or 230.0

Phase:

Single

Special Features:

Determines solution to imbalance with 1 test, retains data when power lost. Previous name: balancing dau. Part of ge 21c10227 fan balance kit, portable

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

T137-e
