Product Name:

Particle size analyzer

Special Features:

Single particle optical sizing (spos) technique to accurately detect a large particle in a sea of small particles; 7080 can detect low levels of aggregates several standard deviations away from the distribution means; detects particles from 0.5 microns to 2500 microns; particle sensitivity of 10 ppt, particle size accuracy of 2 percent, particle count accuracy of 10 percent; multiple configurations for best fit to application, all systems come with software and pc controller

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T398-g
