End Application:

An/fsq-15 (v) afscn/cue

Special Features:

Generates a modified irig b format in terms of hrs., minutes and seconds; simultaneously generates a dc levelshift output plus precisely controlled pulse rates; standard irig b code maybe replaced with any one of a number of format from the irig, nasa or xr3 code families; crystal controlled oscillator; provisions for external 1mhz time base; outputs modulated code generated on a precise 1khz carrier with adj.Amp from 0 to 10 vpp from a low impedance 15 ma peak source and adj modulation ratio from 2: 1 to 6: 1; code format is modified irig b format in terms of hrs., minutes and seconds; dc level shift code is generated with adj.Amp from +1 to +10 v into 600 ohm load; simulataneous rates of 1pps, 10pps, 100pps and 1kpps; six-digit planar readout

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
