Overall Diameter:

40.0 millimeters

End Application:

Lfts table assembly, p/n 717763919-009, f15i aircraft support

Viewing Surfacediameter:

35.0 millimeters

Viewing Surfacethickness:

Between 4.0 millimeters and 4.3 millimeters

Product Name:

Near-infrared polarizer

Special Features:

Metallic thin film devices which provide a high degree of polarization in the near-infrared; consists of a vacuum deposited thin film made up of microscopic prolate metal spheroids all aligned in the same direction on the glass surface; useful field angle +/- 20 degrees about normal; surface quali type 80-50 scratch and dig; mounted between two glass discs, hermetically mounted in a black anodized aluminum ring; polarization plane of transmission indicated by engraving on the edges; wavelength range is 780nm-1250nm; outside diameter is 40.0mm; clear aperture 35.0mm

Material:

Glass

Material:

Glass

Supplementary Features:

T.O. Is33d7-80-21-4, fig 53/4-79

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

T205-a
