End Application:

Project no. 104, program b/20

General Description:

Set consists of 1 channel type4300 main rack group, digital data and control 1 each left and 1 each right, power control 8, main power panel 1, main power box 1, data processor control panel 1, monitor 1, amplifier 1, azimuth detector sample gate 1, azimuth analog digital 1, display controls 1, delay driver 3, film recorder 1, rack 8, telephone 2, waveform gate selector 1, take/up magazine 2, supply magazine 2, power meter panel 1, discriminator, spectral peak 1, threshold control two 1, detector discriminator two 1, discriminator spectral ratio 1, simulator and systems control 1, amplifier 4, camera unit 1, camera drive electronics 2, peak detector and trigger generator 2, adapter 1, waveform delay line 1, teletype converter 1, digital azimuth 1, analyzer 2, blower 9, power supply 13, matrix driver assembly 1, antenna assembly 1, waveform preamplifier 1, azimuth preamplifier 1, assorted cables 29, projector assembly 1, focusing screen assembly 1, voltage balance box 1, card extender 52, single antenna 3
