Product Name:

Measuring set, dew point

Special Features:

Aircraft right hand sensor mtg only

Functional Description:

An air sample is directed into the sensor, dew point ml-644/amq-34 which contains a thermoelectrically-cooled mirror surface and an optical dew point sensing configuration; the control-power supply c-9352/amq-34 supplies power to the cooler, reducing the mirror temp. Until dew forms; the optical sensing configuration controls a servo loop that maintains the mirror temp. At this point, and the indicator, dew point temp. Id-1890/amq-34 displays the dew point temp

Reference Data And Literature:

T.O. 12m3-4-2-1

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
