Overall Length:

1.800 inches

Overall Height:

2.700 inches

Overall Width:

3.000 inches

End Application:

P/n 501580-001; f107-wr101/400 turbofan engine

Product Name:

Thermocouple junction compensation module, type k

Special Features:

Self powered item by 3 replaceable standard aaa type cells; battery life 500 hours continuous; on/off power switch; operates over a range of 10 to 50 degrees c; compensation accuracy +/- 1/4 degrees c at 25 degrees c, +/- 1/2 degrees c from 15 to 35 degrees c ambient, and +/- 3/4 degrees c from 10 to 50 degrees c ambient; output impedance less than 100 ohms

Functional Description:

Used in testing, calibrating, or troubleshooting the icats thermocouple temperature measurement system, or individual type k thermocouple probes; when used with the thermocouple calibrator produces outputs, or reads inputs, referenced to 32 degrees f, 0 degrees c, and automatically compensates for ambient temperature changes

General Description:

To use the compensator it is plugged directly into the top terminal posts of the t/c calibrator; the thermocouple probe or the output cable is then plugged into the top of the compensator; using the t/c junction compensation module eliminates the need for an ice bath

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
