Scale Type:

Horizontal

Measurement Type:

Thermoelectrical circuit

Scale Accuracy Rating:

0.5 percent

Scale Measurement Range:

+0.000/+120.000 degrees fahrenheit

Product Name:

Mobile temperature sensor. Flightline

Special Features:

Rsensor mounted under vehicle, display mounted in dash, 12/24 volt negative system, back lighted, with standes 50g shock, sensor housing nema 4, impervious severe enviro0mental conditions, response time 300 milliseconds

Functional Description:

Ta 3 piece unit consisting of a infrared temperature sensor, signal conditioner, and display used to monitor surface tempertures used to determine the amounts of salt to spread to prevent freezing of road and flightline surfaces

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

A27600
