Overall Length:

18.000 inches

End Application:

Ge 400 engine on s-3a aircraft

Criticality Code Justification:

Agav

Special Features:

Probe is a sensor used to measure the tf34 engine compressor discharge temperature (t3); made of high density construction capable of withstanding continual handling and rapid gas path degeneration; is a two immersion ca thermocouple probe that samples at two points which represent the average radial profile temperature

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A27600
