General Description:

Calibrated for direct reading of 633 nm wavelength of helium-neon light; full range readings range from 0.003 to 10 mw; accuracy is within quiros 2 Qualt transistar battarias: amplified output of up to 50v can be federal fro

10	pct for each of 8 sensitivity ranges; requires 2 9volt transistor batteries; amplified output of up to 50v can be federal from output jacks
ch	art recorder or can be used to drive amplifier-speaker system
